MODEL 1000LA
1000 WATTS
10 KHz-220 MHz

The Model 1000LA is an economical, self-contained, air-cooled broad-band amplifier designed for laboratory applications that require instantaneous bandwidth, high gain, and high power output. Housed in a stylish contemporary enclosure, the 1000LA occupies approximately one-half the space of competitive units with similar power levels. All operating controls are functionally grouped on the front panel for simplicity of operation. These include modern, lighted pushbutton switches for the command functions, POWER, STANDBY, and OPERATE, a control for setting the output level of the amplifier, and a meter for monitoring critical operating voltages and currents. A highly versatile unit, the 1000LA features rugged circuitry to permit operation into any load impedance without shutdown or damage. A quick-acting, solid state crowbar circuit protects the final amplifier tubes from arc damage. An electronic blanking circuit is provided to enable rapid shutdown or gating of the amplifier.
