

# U8903B Performance Audio Analyzer

# Introduction

Make multi-functional and higher performance audio measurements with the U8903B audio analyzer. With extremely low residual distortion of < -110 dB, the U8903B allows you to measure the most demanding audio devices with high accuracy. Perform audio measurements via a *Bluetooth*<sup>®</sup> link with the new Bluetooth option, and make the highest resolution two-channel measurements available when you expand your bandwidth to 1.5 MHz. With these options and more, the U8903B audio analyzer offers you a configurable audio test solution to meet your specific audio application needs.

## Key Features

- Test low distortion devices with a low residual distortion of < -110 dB
- Expand your measurement bandwidth (with the wide bandwidth option N3431A) to measure from DC or 10 Hz to a maximum of 1.5 MHz
- Make Bluetooth audio measurements with the new Bluetooth option
- Perform speech and audio quality measurements with Perceptual Objective Listening Quality Assessment (POLQA) and Perceptual Evaluation of Speech Quality (PESQ)
- Configure the U8903B up to 8 analog analyzer channels
- Implement automatic test with the test sequence function
- Characterize Signal-to-Noise Ratios, SINAD, IMD, DFD, THD ratio, THD+N level, crosstalk and more
- Apply weighing functions, standard filters and custom filters, including notch filter features
- Configure your unit with the digital audio interface option, offering AES3/SPDIF and DSI standard digital audio formats
- Test a variety of current components and applications with a logic level input range of 1.2 V to 3.3 V (DSI)
- Eliminate the need to rewrite programs into SCPI command with the built-in compatibility mode

# Bluetooth Audio Testing – Accurate, Convenient and High Performance

## Bluetooth version 4.0

With the constant evolution of *Bluetooth* specifications, many handheld devices are designed to be compatible with the latest version of *Bluetooth* to take advantage of the technology's latest breakthroughs. The U8903B audio analyzer's *Bluetooth* option operates with version 4.0 and transmits a maximum output power of 5 dBm, ensuring that you can connect to and accurately test a wide variety of *Bluetooth* devices. Over the air *Bluetooth* audio testing with the U8903B should be conducted in a shielded chamber. It's also suitable for the audio test for IoT devices.

Figure 1. The back panel of the U8903B.

## Link monitoring with received power indicator and bit error rate measurement

Ensure the quality of your *Bluetooth* link and easily troubleshoot connection issues with two functions designed for the *Bluetooth* option: the received power indicator and bit error rate measurement.

The received power indicator is a visual indication of the power strength of the device- under-test (DUT). This gives users a quick and convenient way to check that the *Bluetooth*-RF link is strong enough.

The bit error rate (BER) measurement shows the amount of error, given as a percentage, in the connection between the U8903B and the *Bluetooth* DUT. If the engineer receives a BER measurement above 0%, they can adjust the design or setting of the circuit, or replace a component on the circuit; a reduction in the BER measurement means that the changes have improved the link quality. By monitoring changes in the BER value, engineers can determine the causes of the link quality deterioration.

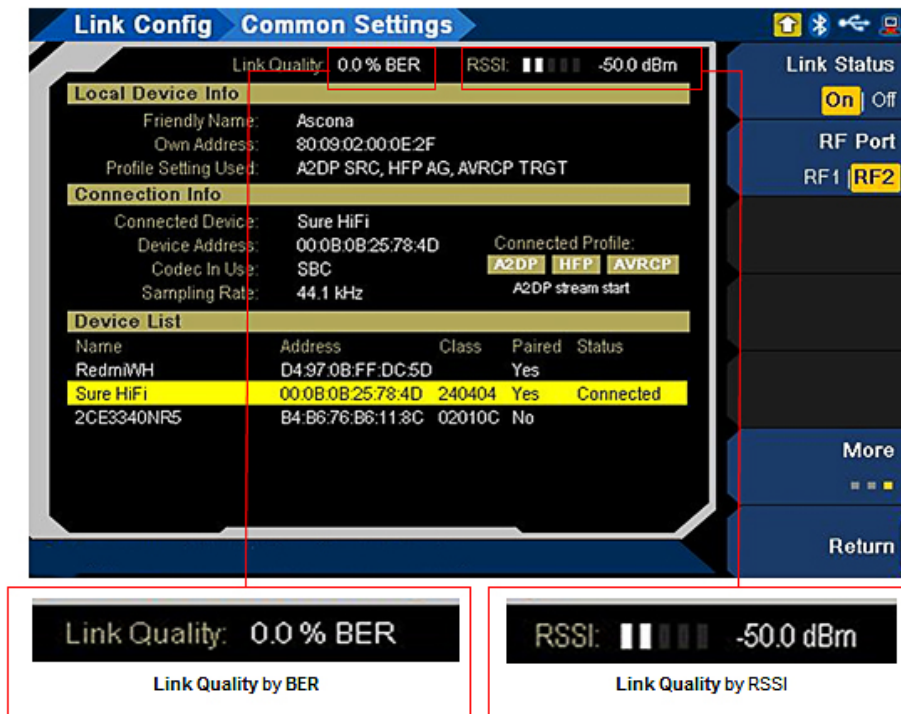

Figure 2. The bit error rate (BER) measurement and the received power indicator (RSSI) functions help ensure the quality of your *Bluetooth* link.

## Local loopback capability

The U8903B audio analyzer comes with local loopback capability to provide fast, accurate loopback testing of Bluetooth chipsets, modules and devices. The U8903B is capable of simulating the *Bluetooth* audio gate (under HFP or HSP) to test a *Bluetooth* device. Engineers are required to test the uplink and downlink between the U8903B and the DUT. The loopback capability allows the uplink signal to be looped back at the U8903B and sent to the DUT, ensuring that both the uplink and downlink are tested at the same time. Without this feature, engineers will need to test the uplink and downlink separately, which would double the test time and require more wiring.

Loopback testing is applicable to *Bluetooth* module design or mobile devices which require a validation of its *Bluetooth* audio quality in both uplink and downlink communications. The feature provides highly accurate measurements as there is no potential audio degradation by the U8903B's internal audio signal processing. Users also receive the full functions of audio measurement, with the tests processed in the analog audio domain, not the *Bluetooth* domain.

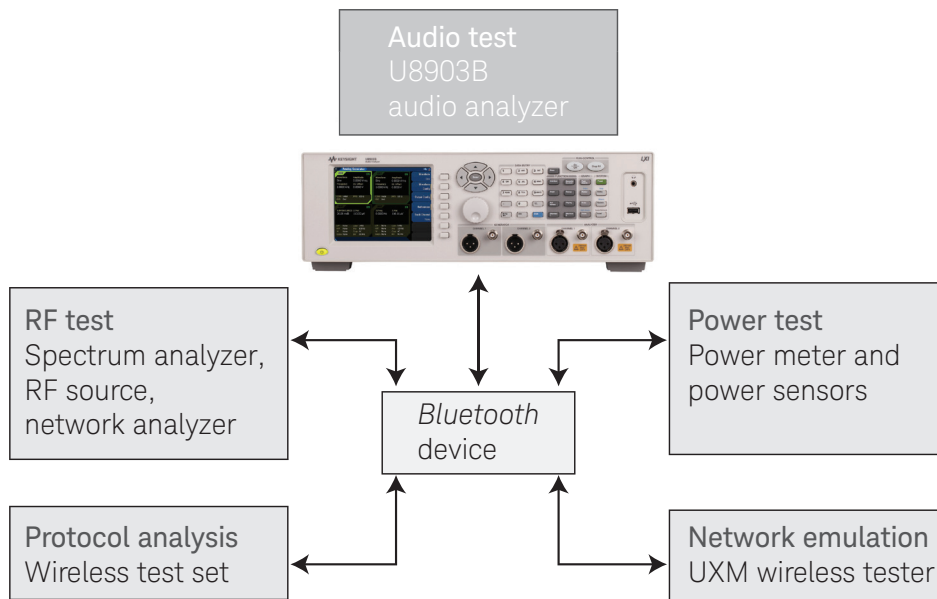

Figure 3. Example of a loopback test case – measuring the *Bluetooth* audio quality of a mobile phone.

## Total Keysight *Bluetooth* solution

With the U8903B's *Bluetooth* option, Keysight Technologies now offers a total *Bluetooth* test solution by providing all the test instruments required for the design and production of *Bluetooth* devices:

- RF test: ESA-E Series spectrum analyzers, X-Series signal analyzers, MXG and EXG signal generators
- Protocol Analysis: Keysight E6640A EXM wireless test set
- High performance audio test: U8903B performance audio analyzer with *Bluetooth* option
- Power test: Keysight power meters and power sensors family
- Network emulation: UXM wireless testers (to simulate 2G/3G/4G mobile networks)

# Expand Your Options to Meet Your Application Needs

## Configurable measurement channels

The U8903B audio analyzer can be configured to 4 or 8 analog analyzer channels. The instrument is capable of simultaneous measurement, on all channels, making the U8903B the ideal choice for multichannel systems such as 5.1 or 7.1 surround sound.

Figure 4. The U8903B's GUI, showing 8 analyzer channel measurements.

## 1.5 MHz wide bandwidth

The U8903B comes with a wide bandwidth option (N3431A), which expands the analog input bandwidth up to 1.5 MHz, with 24-bit resolution and two-million-point FFT. This option is ideal for looking at the spectrum from Class D amplifiers or switching supplies where frequency components or noise well above the audio band can have a detrimental effect on audio quality. It is also suited to applications where low frequency spectrum analyzers were previously used. This option is only available for the two front panel analog analyzer channels.

Figure 5. This screenshot shows an FFT plot of a 300 kHz source and the U8903B's unique ability to measure up the 5th harmonic with unprecedented resolution.

## Voice quality with PESQ and POLQA

The U8903B audio analyzer now offers the ITU-T standard perceptual objective listening quality assessment (POLQA), which is also known as ITU-T P.863, as well as perceptual evaluation of speech quality (PESQ) as recommended in ITU-T P.862.

POLQA and PESQ works by comparing a degraded (usually by typical network transmission interferences) or processed signal to the original reference signal. The perceptual differences between the two signals are then rated based on the mean opinion score (MOS) test, which uses a scale from 1 (bad) to 5 (excellent).

POLQA comes with improvements over its predecessor, PESQ (ITU-T P.862), and has been extended to handle higher bandwidth audio signals, supporting measurements in the common audio bandwidth carried by telephone networks (300 Hz to 3.4 kHz) as well as wideband and super-wideband speech signals (up to 14 kHz) needed to assess HD voice quality. With POLQA, the U8903B is suited for testing 4G/LTE and 5G mobile phone network equipment, VoIP phone and network equipment and HD voice test applications

# Advance Your Measurement Testing

## Low residual distortion

The U8903B comes with extremely low residual distortion and noise. The residual distortion is  $< -110$  dB, enabling the measurement of the most demanding devices. This performance is available for up to 8 channels simultaneously.

Figure 8. An FFT plot showing the residual distortion

## Test sequence control

The built-in test sequencer allows users to create flexible and easy-to-use test sequences that automates testing and provides test reports. This function removes the need to write complicated programming code or to purchase an additional external controller. Users can set up and define the types of measurements as well as define Pass/Fail decisions, reducing test development time as well as test time for the device-under-test (DUT). The test sequence function operates with all options and supports voice quality analysis and *Bluetooth* audio measurements.

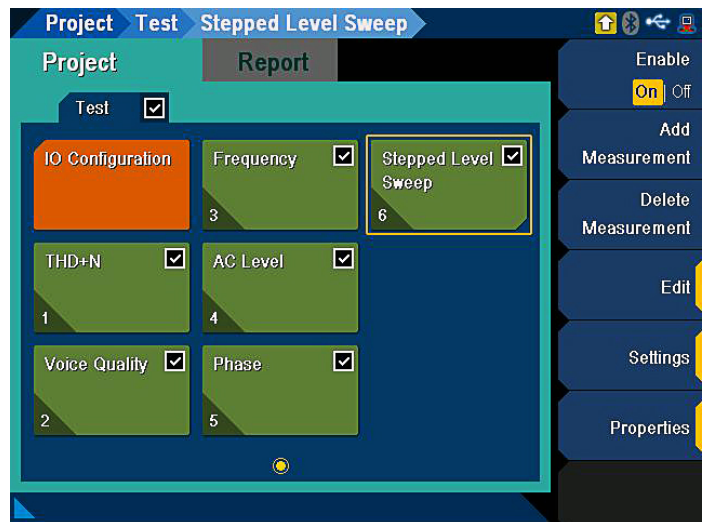

Figure 9. The test sequence control function comes with a selection of preconfigured measurements and allows users to select the most frequently used test sequences for their daily measurement.

# Expand Your Digital Audio Test Capabilities

## Cover your application needs with multiple digital audio interfaces

Test a wide range of digital audio applications with the industry's standard interfaces: AES3/SPDIF and Digital Serial Interface (DSI). Used in the testing and validation of consumer electronics and digital audio related ICs, both digital audio interfaces are available with the U8903B Option DGT. The U8903B also supports multiple DSI formats, such as I2S, Left Justified, Right Justified and DSP. These formats are suitable for most digital audio design and verification applications.

## Measure more applications with a wide logic level input range

The U8903B comes with completely variable logic I/O levels between 1.2 V and 3.3 V, offering the ultimate in compatibility with current and future devices. In addition, the U8903B-105 DSI cable (optional accessories) is designed to make connections between the audio analyzer and the DUT extremely simple. The cable provides convenient connection to the 25-way DSI connector on the rear of the instrument. The other end of the cable offers all the data and clock lines on individual BNC connectors for quick and easy connection to the DUT.

The U8903B also comes with a mode to help customers transition to the new generation of audio analyzers. This mode allows the new U8903B to mimic the legacy audio analyzer, performing measurements and even displaying the same GUI measurement screen as the legacy audio analyzer. For customers currently using the legacy audio analyzer in their test rack, the U8903B also comes with a built-in code emulator that automatically converts the code directly into SCPI commands, the language used by the U8903B.

## Product Characteristics

Signal	Determined by the user specified frequency, amplitude, and phase data
Frequency rate	2 Hz to 0.45 Fs
Maximum number of tones	64

1. Digital generator specifications refer to 24 bits FFS.

## Specifications and Features, continued

<b>Sine burst</b>	
Period	2 cycles to 65535 cycles
Burst on	1 cycles to (65534 or period – 1, whichever is lower)
Burst on to burst off ratio	0 to 100%
<b>Monotonicity</b>	
Samples/step	1 to 32768
<b>Walking one and walking zero</b>	
Samples/step	1 to 65535
<b>Constant value</b>	
Amplitude	-1 FFS to 1 FFS
<b>DC offset</b>	
DC offset	-1 FFS to 1 FFS
<b>Dither</b>	
Distribution	None, triangular, or rectangular
Level	0.5 LSB

### AES3/SPDIF interface features

<b>Output specifications</b>	
Output connector type	
Balanced	XLR (transformer coupling)
Unbalanced	BNC (grounded)
Optical	TOSLINK connector
<b>Output impedance</b>	
Balanced	110 $\Omega$
Unbalanced	75 $\Omega$
<b>Output level</b>	
Balanced	0.3 to 5.1 V <sub>pp</sub>
Unbalanced	0.3 to 2.5 V <sub>pp</sub>
Sampling rate	28 to 192 kHz
Sampling rate accuracy	$\pm 5$ ppm
Output level accuracy	$\pm 1$ dB (typical)
Audio bit	8 bits to 24 bits
<b>Inherent jitter (typical)</b>	
Balanced	$\leq 1.5$ ns
Unbalanced	$\leq 1.5$ ns
Optical	$\leq 5$ ns
<b>Clock and sync</b>	
<b>Internal master clock</b>	
Maximum clock rate	192 kHz
Accuracy	$\pm 5$ ppm
Inherent jitter	$\leq 1$ ns (typical)

## Specifications and Features, continued

<b>Sync clock output</b>	
Connector type	25-pin female D-SUB connector pin-1
Impedance	50 $\Omega$
Output level	3.3 V (LVCMOS IO standard)
Polarity	Normal or invert
Output type	Bit clock (128 Fs)
<b>Protocol</b>	
Channel status bits	Professional or consumer (all applicable bits are editable for advanced settings)
Format	Professional or consumer
User bits	Set or cleared
Validity flag	Set or cleared

### DSI features

<b>Output features</b>	
Output connector type	25-pin female D-SUB connector 25-pin male D-SUB to BNC connector (optional accessories)
Output impedance	50 $\Omega$
Logic level	1.2 V, 1.5 V, 1.8 V, 2.5 V, 3.3 V, or user-defined (LVCMOS standard)
Sampling rate	6.75 kHz to 400 kHz
Sampling rate accuracy	$\pm 5$ ppm
<b>Master-clock</b>	
Multiplier	64 to 1024 (depends on the Word Length)
Maximum frequency	51.2 MHz
Maximum bit clock	51.2 MHz
Maximum sampling rate	400 kHz
Data format	Left Justified, Right Justified, I <sup>2</sup> S, or DSP
Word length	8 bits to 32 bits per channel
Audio bit	8 bits to 24 bits (step by 1 bit)
Word clock rate	6.75 kHz to 400 kHz
<b>Clock and sync</b>	
<b>Internal master clock</b>	
Maximum clock rate	10 MHz
Accuracy	$\pm 5$ ppm
Inherent jitter	$\leq 1$ ns (typical)
<b>Clock source setting (analyzer and generator)</b>	
	Incoming bit clock from DUT
	Internal clock
	External clock from external sync clock input
<b>DSI clock output</b>	
Impedance	10 k $\Omega$ typical
Output level	1.2 to 3.3 V <sub>pp</sub>
Polarity	Normal or invert
<b>Word clock polarity</b>	
	Leading edge or falling edge (with respect to bit clock)

### Digital analyzer features

<b>Amplitude</b>	
AC level range	< -120 to 0 dBFS
DC level range	± 1 FFS
AC accuracy	± 0.001 dB (at 1 kHz)
DC accuracy	± 0.001 dB
AC flatness	± 0.001 dB (10 Hz to 0.45 Fs)
Unit (reference)	FFS, %FS, V, dBFS, LSB, dBr, dBu, dBV, Hex, Dec, and x
<b>Frequency</b>	
Range	5 Hz to 0.45 Fs
Accuracy	± 5 ppm (10 Hz to 0.45 Fs)
<b>Phase</b>	
Accuracy	± 0.005°
Resolution	± 0.001°
<b>THD+N</b>	
Range	10 Hz to 0.45 Fs
Accuracy	± 0.3 dB
Residual distortion	≤ -140 dB
<b>IMD</b>	
SMPTE IMD	1:1/4:1/10:1
High frequency	2 to 60 kHz, or 0.45 Fs (whichever is lower)
Low frequency	40 to 500 Hz
Accuracy	± 0.5 dB
<b>DFD</b>	
Frequency difference	80 Hz to 2 kHz
Center frequency	3 to 79 kHz, or 0.45 Fs (whichever is lower)
Accuracy	± 0.5 dB

### AES3/SPDIF interface features

<b>Input specifications</b>	
Input connector type	
Balanced	XLR (transformer coupling)
Unbalanced	BNC (grounded)
Optical	TOSLINK connector
<b>Input impedance</b>	
Balanced	110 Ω or high impedance (> 2 kΩ)
Unbalanced	75 Ω or high impedance (20 kΩ typical)

## Ordering Information

Product model	Description
U8903B-STD	Performance audio analyzer, 2 channels
Standard shipped accessories	USB cables
	Power cord
	Keysight U8903B audio analyzer product reference CD-ROM
	Certificate of calibration
Measurement channel options	
U8903B-AN4	Analog analyzer, 4 channels
U8903B-AN8	Analog analyzer, 8 channels
U8903B-DGT	Digital audio card
Bluetooth option	
U8903B-BLU	Bluetooth card
U8903B-BL2	Bluetooth card, secondary option slot
Bundling options <sup>1</sup>	
U8903B-201	Performance audio analyzer with 4 analog analyzer channels, digital audio (AES3/SPDIF and DSI digital audio). This bundle option is suitable for consumer audio or automotive infotainment system test.
U8903B-209	Performance audio analyzer; 2 channels with 50 ohm impedance and N3431A. This bundle option is for military customer.
U8903B-210	Performance audio analyzer with 4 analog analyzer channels, digital audio (AES3/SPDIF and DSI digital audio) and Bluetooth. This bundle option is suitable for consumer audio or automotive infotainment system test with Bluetooth devices.
U8903B-211	Performance audio analyzer; 2 channels with 50 ohm impedance, N3431A and Bluetooth. This bundle option is for military customers.
U8903B-212	Performance audio analyzer; 2 channels with 50 ohm impedance. This bundle option is suitable for consumer audio test.

1. The bundle options include U8903B-STD and other options. They are designed for some common applications or required by some specific customers.

Product model	Description
<b>Optional software</b>	
N3431A	Wide bandwidth option –1.5 MHz (fixed perpetual license)
N3433A	POLQA and PESQ measurement software (fixed perpetual license)
<b>Optional accessories</b>	
11500A	Cable assembly, Type-N (male) to Type-N (male), DC to 6.0 GHz
U8903A-101	Male BNC to male BNC cable; 1.2 m
U8903A-102	Male BNC to male RCA cable, 2 m
U8903A-103	Male XLR to female XLR cable; 2 m
U8903A-908	Rackmount kit
U8903B-105	Cable, digital serial interface for DSI input and output connection
U8903A-107	Cable, accessory – Male XLR-2 male BNC analyzer, 0.26 m
U8903A-108	Cable, accessory – Female XLR-2 male BNC generator, 0.26 m
U8903A-109	BNC accessory kit
<b>Warranty and services</b>	
U8903B-1A7	ISO17025 compliant calibration with test data
U8903B-A6J	ANSI Z540 compliant calibration with test data
