Manual Editions

Manual Part Number: N6700-90001
Edition 8, January 2015
Available in electronic format only.

Updates of this manual containing minor corrections may have the same edition date. Revised editions are identified by a new edition date.

Certification

Keysight Technologies certifies that this product met its published specifications at time of shipment from the factory. Keysight Technologies further certifies that its calibration measurements are traceable to the United States National Institute of Standards and Technology, to the extent allowed by the Institute's calibration facility, and to the calibration facilities of other International Standards Organization members.

Technologies Licenses

The hardware and or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

U.S. Government Restricted Rights

Software and technical data rights granted to the federal government include only those rights customarily provided to end user customers. Keysight provides this customary commercial license in Software and technical data pursuant to FAR 12.211 (Technical Data) and 12.212 (Computer Software) and, for the Department of Defense, DFARS 252.227-7015 (Technical Data – Commercial Items) and DFARS 227.7202-3 (Rights in Commercial Computer Software or Computer Software Documentation).

Declaration of Conformity

Declarations of Conformity for this product and for other Keysight products may be downloaded from the Web. Go to http://www.keysight.com/go/conformity and click on “Declarations of Conformity.” You can then search by product number to find the latest Declaration of Conformity.

Regulatory Symbols

The CE mark shows that the product complies with all applicable European Directives.

The C-Tick mark is a registered trademark of the Australian Communications Authority.

This ISM device complies with Canadian ICES-001.

Cet appareil ISM est conforme à la norme NMB-001 du Canada.

This is the symbol for an Industrial, Scientific and Medical, Group 1 Class A product.

The CSA mark is a registered trademark of Intertek-etlsemko Inc.

This is the RoHS (Restriction of Hazardous Substances) symbol for electrical and electronic equipment.

This symbol indicates separate collection for electrical and electronic equipment mandated under EU law as of August 13, 2005. All electric and electronic equipment are required to be separated from normal waste for disposal (Reference WEEE Directive 2002/96/EC).

Where to Find More Information

This document provides specification and supplemental characteristic information for the following instruments:

- Keysight N6731B through N6784A Power Modules
- Keysight N6700B through N6705B Mainframes

Document	Description
Keysight N6700 Modular Power System Family: Low-Profile MPS Mainframe for Automated Test Environments	The Keysight N6700 Low-Profile Modular Power System (MPS) is a 1U (rack unit) high, multiple-output programmable DC power supply system that enables test system integrators to optimize performance, power and price to match test needs. Go to: http:// literature.cdn.keysight.com/litweb/pdf/5989-1411EN.pdf
Keysight N6700 Modular Power System Family: DC Power Analyzer Mainframe for R&D	The Keysight N6705 DC Power Analyzer represents an entirely new instrument category for R&D engineers. It provides unrivaled productivity gains when sourcing and measuring DC voltage and current into a DUT. Using the Keysight N6705 DC Power Analyzer, R&D engineers can gain insights into the DUT's power consumption in minutes, with all sourcing and measuring functions available from the front panel. Chapter 1
Power Module Differences

This chapter provides a brief overview of the basic differences between the Keysight N6700 series DC Power Modules. Note that the basic capabilities of a power module depend not only on its hardware capabilities, but also the on the hardware and firmware capabilities of the mainframe in which it is installed.

In addition to their primary output and measurement capabilities, power modules installed in a Keysight N6705 DC Power Analyzer have expanded capabilities such as front panel scope view, arbitrary waveform generation, and internal and external data logging.

Refer to the Keysight N6700 or N6705 User's Guide for more information about the power module capabilities.

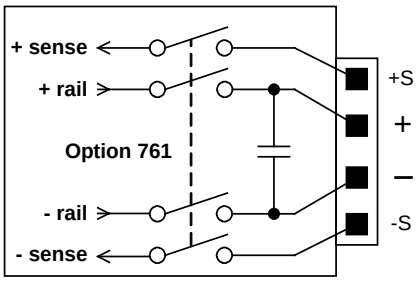
[1] Arbitrary waveform generation and list capability are not available on the negative current output on Model N6783A.

[2] Option 055 deletes the Data Logger function on Model N6705.

[3] Only available when using the remote interfaces; not the front panel.

Power Module Option Characteristics

Option 760 & 761



Option 761 provides output and sense disconnect relays. Option 760 provides polarity reversal in addition to output and sense disconnect. Note that models N678xA SMU have output and sense disconnect relays built in.

- Option 760 limits the output current to 10 A on Models N6742B and N6773A.
- Option 760 is not available on Models N6741B, N6751A, N6752A, N6761A, N6762A, and N6781A – N6786A

Although the plus and minus rail of the output power mesh are physically disconnected from the output terminals with options 760 and 761, a small AC network is still connected across the plus and minus output terminals (see figure).

Option 054

Option 054 (High-speed Test Extensions) include output list and digitized measurement capability. This option is separately orderable for Models N673xB, N674xB, N677xA, and N675xA when installed in an N6700 MPS mainframes. All other power modules as well as the N6705 DC Power Analyzer mainframes have output list and digitized measurement capability built in.

Output list:

- Maximum number of steps = 512
- Maximum dwell time in seconds = 262
- Maximum list repetitions = 256 or infinite

Digitized measurement:

- Maximum measurement points = 524,288
- Maximum sample rate = 97.656 kHz

Option 2UA

Option 2UA is a 200 microampere measurement range available on Models N6761A and N6762A only. It includes Option 761 relay capability.

Unless otherwise noted, specifications are warranted over the ambient temperature range of 0 to 40°C after a 30-minute warm-up period. Specifications apply at the output terminals, with each module's sense terminals internally connected to its output terminals (local sensing).

Refer to the Keysight N6700 or N6705 Service Guide for the setup conditions for all performance specifications.

Supplemental characteristics are not warranted but are descriptions of performance determined either by design or by type testing. All supplemental characteristics are typical unless otherwise noted.

Keysight N675xA High Performance Power Modules

Unless otherwise noted, specifications are warranted over the ambient temperature range of 0 to 40°C after a 30-minute warm-up period. Specifications apply at the output terminals, with each module's sense terminals internally connected to its output terminals (local sensing).

Refer to the Keysight N6700 or N6705 Service Guide for the setup conditions for all performance specifications.

Supplemental characteristics are not warranted but are descriptions of performance determined either by design or by type testing. All supplemental characteristics are typical unless otherwise noted.

Chapter 4
Keysight N676xA Precision Power Modules

Unless otherwise noted, specifications are warranted over the ambient temperature range of 0 to 40°C after a 30-minute warm-up period. Specifications apply at the output terminals, with each module's sense terminals internally connected to its output terminals (local sensing).

Refer to the Keysight N6700 or N6705 Service Guide for the setup conditions for all performance specifications.

Supplemental characteristics are not warranted but are descriptions of performance determined either by design or by type testing. All supplemental characteristics are typical unless otherwise noted.

[1] Output current is derated 1% per °C above 40°C.

[2] Applies when measuring currents that remain within the low range. Due to thermal settling, when transitioning from measuring full-rated output current (the worst case), to measuring the current within the low range, the low range accuracy specification is typically met within 5 seconds after the current has transitioned into the low range. Accuracies within this 5 second settling period are typically 2X the specified accuracy or better.

[3] When relay option 760 or 761 is installed on Models N6763Aand N6765A, the settling band is ±200 mV.

[4] When relay option 760 or 761 is installed on Models N6764Aand N6766A, the settling band is ±350 mV.

Remote Sense Capability:	Outputs can maintain specifications with up to a 1-volt drop per load lead. The load lead drop reduces the maximum available voltage at the load.		
Series and Parallel Operation:	Identically rated outputs can be operated directly in parallel or can be connected for straight series operation.		
Minimum Output Turn-On Delay: (Time from when any Output On command is received until the output starts turning on)			
Without relay option	32 ms [NOTE 5]	18 ms	18 ms
With relay Option 760	58 ms [NOTE 5]	44 ms	44 ms

[1] If you are operating the unit below 255 μA in constant current mode, the output may become unregulated with the following load conditions: The load resistance is <175 mΩ **and** the load inductance is >20 μH. If this occurs, an UNRegulated flag will be generated and the output current may rise above the programmed value but will remain < 255 μA.

[2] Correction On compensates for current flowing into the output capacitor during voltage transients

[3] Stated values apply when the load resistance is at or close to zero. To determine the frequency for larger resistance valuess, refer to the User's Guide under "Measurement System Bandwidth".

[4] Modules can discharge the specified capacitive load from full scale to 0V at a rate of 4 times/second.

[5] In Current priority mode, minimum delay is 23 ms without relays and 45 ms with relay Option 760.

Arbitrary Waveform Generator Maximum Bandwidth

NOTE The information in this section only applies when the power modules are installed in a Keysight N6705 DC Power Analyzer.

The following tables characterize the maximum bandwidth of the arbitrary waveform generator. The maximum bandwidth is based on a sine wave into a resistive load and apples to any output current. The following definitions apply in the frequency tables:

V p-p = Voltage peak-to-peak

3 dB max. = Max. frequency where the voltage drops to 3 dB below its setting

THD 3 dB = The total harmonic distortion at 3 dB max. frequency

THD < 1.5% = The frequency below which the THD is less than 1.5%.

[1] Applies to N6781A and N6785A only

[2] For N6785A and N6786A applies with a 0 - 4 V step.

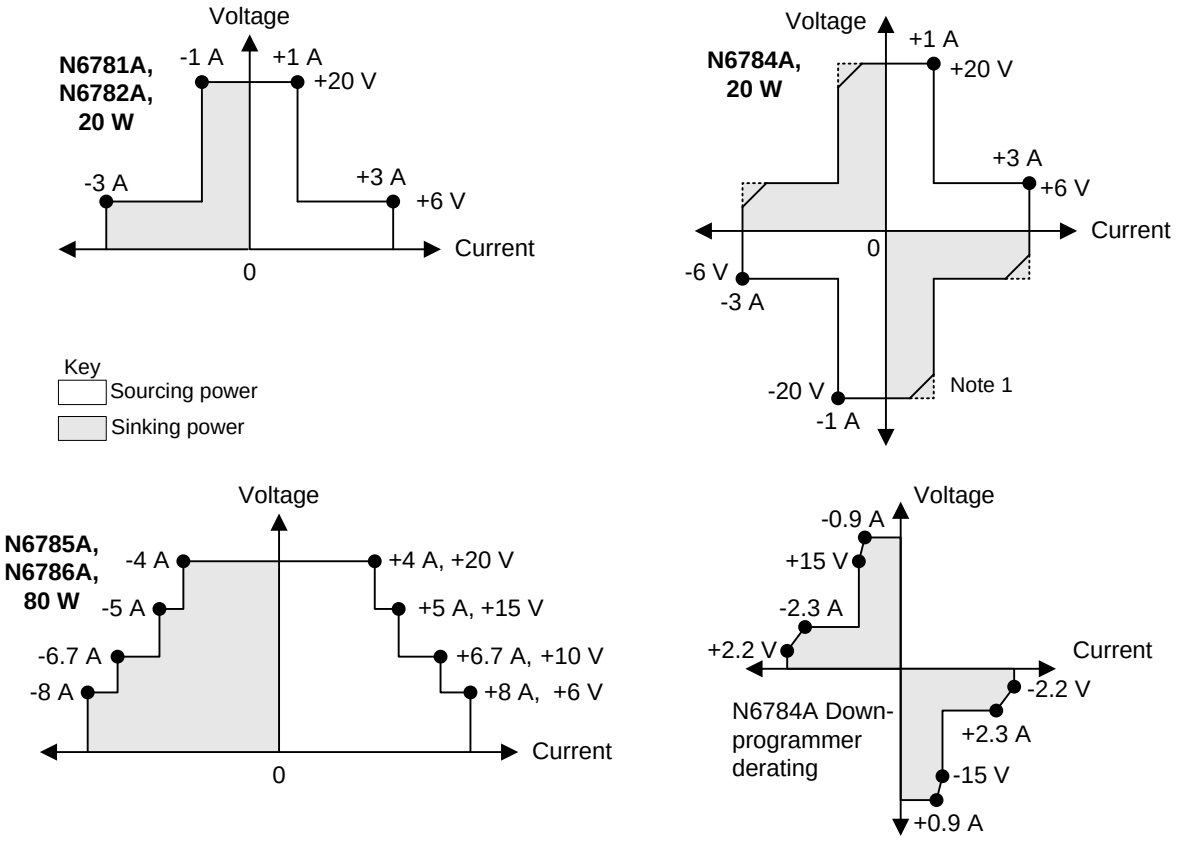
[3] Response time applies from the occurrence of the over-voltage condition to the start of output shutdown.

[4] When using an N6705A mainframe connected through the front panel binding posts, additional output capacitance causes large measurement peaking/overshoots when the load impedance is >~1 kΩ. This does not apply to N6705B mainframes. When using an N6705A or N6705B mainframe connected **directly** to the module connector, there are slight measurement peaking/overshoots when the load impedance is > ~10 kΩ.

[5] Values in parentheses apply when power modules are installed in N6705A mainframes.

[6] In CV priority mode, uneven current sharing while paralleling prevents using the lower current measurement ranges and will also cause degradation in transient response performance.

Output Quadrant Characteristic



Note 1. When sinking power, Keysight Model N6784A can operate at the maximum rated output power for only a limited time. When the internal temperature of the unit exceeds its safe limit, the output latches off. A protect clear is required to resume normal operation. The condition is annunciated by the OT status bit. The Downprogrammer derating figure shows the safe limit boundary values.

Measurement Accuracy and Resolution
(with shorter measurement intervals)

The following table shows changes to the short-term measurement accuracy and resolution with various number of power line cycle (NPLC) measurement settings. Changes are due to the A-to-D converter's noise performance. The table's baseline is 1 NPLC with no added noise. To determine the measurement accuracy at shorter averaging intervals, simply add the noise value to the fixed accuracy value in the specification table.

Chapter 6
Keysight N6783A-BAT, N6783A-MFG Application-Specific Power Modules

Unless otherwise noted, specifications are warranted over the ambient temperature range of 0 to 40°C after a 30-minute warm-up period. Specifications apply at the output terminals, with each module's sense terminals internally connected to its output terminals (local sensing).

Refer to the Keysight N6700 or N6705 Service Guide for the setup conditions for all performance specifications.

Supplemental characteristics are not warranted but are descriptions of performance determined either by design or by type testing. All supplemental characteristics are typical unless otherwise noted.

Performance Specifications

	N6783A-BAT	N6783A-MFG
DC Ratings:		
Voltage	0 - 8 V	0 - 6 V
Current [NOTE 1]	– 2 to +3 A	– 2; 0 to +3 A
Power	24 W	18 W
Low current measurement range	150 mA	150 mA
Output Ripple and Noise (PARD): (from 20 Hz – 20 MHz)		
CV peak-to-peak	8 mV	8 mV
CV rms	1.5 mV	1.5 mV
Load Effect (Regulation): (For any output load change, with a maximum load-lead drop of 0.5V/lead. The load lead drop reduces the maximum available voltage at the load.)		
Voltage	6 mV	6 mV
Current	2 mA	2 mA
Source Effect (Regulation):		
Voltage	2 mV	2 mV
Current	1 mA	1 mA
Programming Accuracy: (@ 23 °C ±5 °C after a 30 minute warm-up. Applies from minimum to maximum programming range at any load.)		
Voltage	0.1% + 10 mV	0.1% + 10 mV
Positive Current	0.1% + 1.8 mA	0.1% + 1.8 mA
Negative Current @ –2 A	0.2% + 1.8 mA	N/A
Measurement Accuracy: (@ 23 °C ±5 °C. Applies when measuring the default value of 1024 data points with a 20.48 µs time interval.)		
Voltage	0.05% + 5 mV	0.05% + 5 mV
Current high range	0.1% + 600 µA	0.1% + 600 µA
Current low range	0.1% + 75 µA	0.1% + 75 µA
Load Transient Recovery (Time to recover to within settling band for a load change from 0.15 A to 1.5 A and from 1.5 A to 0.15 A at 6 V output)		
Voltage settling band [NOTE 2]	± 75 mV	± 75 mV
Time [NOTE 2]	< 45 µs	< 45 µs

[1] Output current is derated 1% per °C above 40°C.

[2] When relay Option 761 is installed, the settling band is ± 90 mV. The time is < 75 µs.

Supplemental Characteristics

	N6783A-BAT	N6783A-MFG
Programming Ranges:		
Voltage	15 mV to 8.16 V	15 mV to 6.12 V
Positive Current	5 mA to 3.06 A	5 mA to 3.06 A
Negative Current	– 5 mA to – 2 A	Fixed at – 2 A
Programming Resolution:		
Voltage	2.5 mV	2.5 mV
Positive Current	1 mA	1 mA
Negative Current	10 mA	N/A
Measurement Resolution:		
Voltage	300 μV	300 μV
Current high range	100 μA	100 μA
Current low range (≤ 0.150 A)	5 μA	5 μA
Programming Temperature Coefficient per °C:		
Voltage	25 ppm + 50 μV	25 ppm + 50 μV
Current	25 ppm + 10 μA	25 ppm + 10 μA
Measurement Temperature Coefficient per °C:		
Voltage	25 ppm + 40 μV	25 ppm + 40 μV
Current high range	25 ppm + 2.5 μA	25 ppm + 2.5 μA
Current low range (≤ 0.150 A)	25 ppm + 1.5 μA	25 ppm + 1.5 μA
Maximum Up-Programming and Down-Programming Time with Full Resistive Load (Time from 10% to 90% of total voltage excursion)		
Voltage Settling from 0V to Full Scale	4.0 ms	4.0 ms
Voltage Settling from Full Scale to 0V	4.0 ms	4.0 ms
Maximum Up-Programming and Down-Programming Settling Time with Full Resistive Load (Time from start of voltage change until voltage settles within 0.1% of the full-scale voltage of its final value)		
Voltage Settling from 0V to Full Scale	20 ms	20 ms
Voltage Settling from Full Scale to 0V	20 ms	20 ms
Over-voltage Protection:		
Accuracy without disconnect relays	0.25% + 75 mV	0.25% + 75 mV
Accuracy with disconnect relays	0.25% + 275 mV	0.25% + 275 mV
Nominal range	0 – 10 V	0 – 10 V
Programmable delay time	60 μs – 5 ms	60 μs – 5 ms
Over-Current Protection:		
Programmable delay time	0 – 255 ms	0 – 255 ms
Nominal Range	5 mA – 3.06 A	5 mA – 3.06 A
Output Ripple and Noise: (PARD)		
CC rms:	4 mA	4 mA
Common Mode Noise: (From 20 Hz – 20 MHz; from either output to chassis)		
Rms	1 mA	1 mA
Peak-to-peak	6 mA	6 mA
Remote Sense Capability:	Outputs can maintain DC specifications with up to a 0.5-volt drop per load lead. Maximum sense lead resistance is limited to 300mΩ/lead.	

Supplemental Characteristics (continued)

	N6783A-BAT	N6783A-MFG
Series and Parallel Operation:	Identically rated outputs **can** be operated directly in parallel. N6783A modules **cannot** be used in series with other N6783A modules or any other N67xx module.	
Down-programming Capability: (Current down-programming capability is reduced at output voltages below 0.5 V)		
Continuous power	12 W	12 W
Continuous current	2 A	2 A

Supplemental Characteristics

	N6700B, N6701A, N6702A	N6705A, N6705B
Maximum Power Available for Modules:		
Values represent combined power rating of all modules installed per mainframe.	400 W (for N6700B mainframes) 600 W (for N6701A mainframes) 1200 W (for N6702A mainframes)	600 W
Front Panel Output Terminals:		
Maximum current rating	N/A	20 A
BNC Trigger Connectors:		
I/O	N/A	Digital TTL level compatible
Maximum voltage	N/A	5 V
USB Current Ratings:		
Front panel USB connector	N/A	200 mA
Rear panel USB connector	N/A	300 mA
Data Storage:		
Internal flash memory	8 Mbyte	4 Gbyte (Earlier N6705 models have less memory)
Protection Response Characteristic:		
INH input	5 μs from receipt of inhibit to start of shutdown	
Fault on coupled outputs	< 10 μs from receipt of fault to start of shutdown	
Command Processing Time:		
	≤ 1 ms from receipt of command to start of output change	
Digital Port Characteristics:		
Maximum voltage ratings	+16.5 VDC/– 5 VDC between pins (pin 8 is internally connected to chassis ground).	
Pins 1 and 2 as FLT output	Maximum low-level output voltage = 0.5 V @ 4 mA Maximum low-level sink current = 4 mA Typical high-level leakage current = 1 mA @ 16.5 VDC	
Pins 1 - 7 as digital/trigger outputs (pin 8 = common)	Maximum low-level output voltage = 0.5 V @ 4 mA; 1 V @ 50 mA; 1.75 V @ 100 mA Maximum low-level sink current = 100 mA Typical high-level leakage current = 0.8 mA @ 16.5 VDC	
Pins 1 - 7 as digital/trigger inputs and pin 3 as INH input (pin 8 = common)	Maximum low-level input voltage = 0.8 V Minimum high-level input voltage = 2 V Typical low-level current = 2 mA @ 0 V (internal 2.2k pull-up) Typical high-level leakage current = 0.12 mA @ 16.5 VDC	
Interface Capabilities:		
GPIB	SCPI - 1993, IEEE 488.2 compliant interface	
LXI Compliance	Class C (only applies to units with LXI label on front panel)	
USB 2.0	Requires Keysight IO Library version M.01.01 or 14.0 and up	
10/100 LAN	Requires Keysight IO Library version L.01.01 or 14.0 and up	
Built-in Web server	Requires Internet Explorer 7+ or Firefox 2+	

Supplemental Characteristics (continued)

	N6700B, N6701A, N6702A	N6705A, N6705B
Regulatory Compliance:		
EMC	Complies with European EMC Directive for test and measurement products. ● IEC/EN 61326-1 ● CISPR 11, Group 1, class A ● AS/NZS CISPR 11 ● ICES/NMB-001 Complies with Australian standard and carries C-Tick mark. This ISM device complies with Canadian ICES-001. Cet appareil ISM est conforme à la norme NMB-001 du Canada.	
Safety	Complies with European Low Voltage Directive and carries the CE-marking. Conforms to UL 61010-1 and CSA C22.2 61010-1.	
Environmental Conditions		
Operating environment	Indoor use, installation category II (for AC input), pollution degree 2	
Temperature range	0°C to 55°C (output current is derated 1% per °C above 40°C ambient temperature)	
Relative humidity	Up to 95%	
Altitude	Up to 2000 meters	
Storage temperature	-30°C to 70°C	
Acoustic Noise Declaration:		
This statement is provided to comply with the requirements of the German Sound Emission Directive, from 18 January 1991.	Sound Pressure Lp <70 dB(A), At Operator Position, Normal Operation, According to EN 27779 (Type Test). Schalldruckpegel Lp <70 dB(A), Am Arbeitsplatz, Normaler Betrieb, Nach EN 27779 (Typprüfung).	
Output Terminal Isolation:		
Maximum rating	No output terminal may be more than ±240 VDC from any other terminal or chassis ground.	
N6781A Note	When using the AUX measurement input terminals on Model N6781A, no output or input terminal may be more than ±60 VDC from any other terminal and chassis ground.	
AC Input:		
Input Ratings	~ 100 VAC – 240 VAC; 50/60/400Hz	~ 100 VAC – 240 VAC; 50/60/400Hz
Power Consumption	1000 VA (N6700B) 1440 VA (N6701A) 1440 VA (N6702A @ < 180 VAC input) 2200 VA (N6702A @ > 180 VAC input)	1440 VA
Power Factor	0.99 @ nominal input and rated power	0.99 @ nominal input and rated power
Fuse	Internal fuse - not customer accessible.	Internal fuse - not customer accessible.
N6702A Note	AC mains circuits rated at 100-180 VAC **cannot** supply enough current to power the N6702A mainframe when operated at its full rated power. When connected to a 100-180 VAC mains, internal circuits will limit the power to modules to 600 W maximum.	
Net Weight: (typical)		
Mainframe with 4 modules	N6700B 12.73 kg / 28 lbs N6701A 11.82 kg / 26 lbs N6702A 14.09 kg / 31 lbs	16 kg / 35 lbs
Single-wide power module	1.23 kg / 2.71 lbs	1.23 kg / 2.71 lbs
