### Model 308LMX

As one of the lower three phase power member of Pacific Power's LMX-Series popular family of high performance Linear AC Power Sources, the 308LMX offers the same low output voltage noise and distortion, ease of installation, and high AC waveform fidelity as found in all of Pacific Power's Linear AC Power Sources. Control and operational features provide a high degree of versatility and ease of use for applications ranging from simple, manually controlled frequency conversion to harmonic testing and sophisticated programmable transient simulation.

### AC TEST POWER

All 308LMX models are equipped with a powerful micro-controller with the ability to operate as a fully integrated test system. This enables a variety of power conditions and transients to be applied to the device under test while metering and analyzing all output performance parameters. For higher power requirements, refer to the complete LMX series catalog.

### FREQUENCY/ VOLTAGE CONVERSION

The 308LMX is an excellent source of stable AC Voltage over the frequency range of 15 to 5,000 Hz. The output frequency is quartz-crystal stabilized. Output voltages up to 135V<sub>L-N</sub> in single phase mode and up to 270V<sub>L-L</sub> in split phase mode are available on the 308LMX model and up to 600V<sub>L-L</sub> in split phase mode or 585V<sub>L-L</sub> in three phase mode on the 308LMXT model.

### PHASE CONVERSION

With the ability to provide two or three phase output, the 308LMX is a good choice to convert one-phase line voltage into precisely controlled split (two-phase) or three phase output power.

- Notes:**
1. Rated output power is based on a combination of output voltage, current and load power factor. Values stated represent the rated capabilities of a given model. Consult factory for assistance in determining specific unit capabilities as they might apply to your application.
  2. Output Form: Unit is operable as single phase with dual range capability or three phase. Output voltage ranges and 1Ø/2Ø or 3Ø conversions are selected by front panel or bus command.
  3. Output voltage ranges listed are for standard units. VMAX is achievable with nominal input voltage at full load.
  4. Current ratings at 125 V<sub>RMS</sub> output. Current may vary with power factor.
