- Enhances usability of Wayne Kerr Analyzers - 3255B series of Inductance Analyzers
- 3260B Precision Magnetics Analyzer
- DC Bias Units can deliver between 25 mA and 125 A DC bias current in steps of 25 mA
- DC Bias Fixture model 1009 allows accurate and safe testing of SMD inductors
- Adds additional functionality

3265B/25A can deliver up to 25 A in steps of 25 mA

## SMD inductor tests up to 50 A

With the addition of the 1009 DC Bias Fixture DC bias currents up to 50 A can be applied to an SMD inductor during component test in order to evaluate the devices thoroughly at the operational bias currents.
The fixture operates with either one or two 3265B DC bias units and a 3260B Precision Magnetics Analyzer. The optional 1009 high current lead set will be required if two 3265B/25As are used.

Four front panel mounted BNC connectors and two captive high current cables ensure simplicity and ease of use with a 3265B.

Interchangeable component test carriers ensure that the 1009 DC Bias Fixture may be used with a wide variety of devices. Blank carriers are available which enable device specific test fixtures to be developed or alternatively a carrier design and manufacturing service is available.

1009 Fixture enables 50 A to be applied to an SMD inductor
Stable component fixturing ensures high accuracy and repeatable measurements. Enclosed fixtures, with safety interlocks, minimises risk to operators.

## Technical specifications

The 3265B series of DC bias units must be used in conjunction with either a 3260B, 3255BL, 3255B or 3255BQ.

## Compliance voltages

Maximum compliance voltage ( $<12 \mathrm{kHz}$ ) 11 V DC at 0.25 V AC drive level.
10 V compliance at 1 V AC drive level. For $\mathrm{f}>12 \mathrm{kHz}$ deduct 0.5 V .

## Applications

Permits measurement analysis of wound components with levels of DC bias current higher than the standard 1A

## Variable measured

In impedance mode: L, Z, R, Q, D.
Not applicable to Rdc, or transformer measurements
Measured frequency range
3255BL 20 Hz to 200 kHz (3265B/5A or 3265B10A only)
3255B: 20 Hz to 500 kHz
3255BQ: 20 Hz to 1 MHz
3260B: 20 Hz to 3 MHz (with 3265BQ/25A)

## Basic accuracy

$\pm 1 \%$, Varies with measurement speed, frequency and options chosen.

## Measurement terminals

2-terminals measurement via M8 studs.
4-terminal measurement via Kelvin leads and M8 studs.
Measurement terminals internally protected by 1.6A fuses against normal inductor back-EMF or accidental disconnection of inductor. Front panel fuses easily replaced.
